

Living in New Mexico and traveling through much of the sparse southwestern United States, satellite radio becomes an important part of our radio listening habits.

Being retired, we have the opportunity to travel to many large cities in the U.S. Again satellite radio's instant traffic and weather reports are important to us. We have a consistent source of information without having to scratch all over the dial in each large city to find the information we want and need.

The NAB petition 04-160 should be rejected by the FCC. Your consideration of our needs is appreciated.
